**• Line Voltage Selection (for multiple voltage model only)**

- \* The desired voltage may be set with the VOLTAGE SELECTOR knob on the rear panel, using a screwdriver.
- \* Do not twist the VOLTAGE SELECTOR knob with excessive force as this may cause damage.
- \* If the VOLTAGE SELECTOR knob does not turn smoothly, please contact a qualified serviceman.

**CAUTION:**

Whenever the power switch is in the OFF state, the apparatus is still connected on AC line voltage. Please be sure to unplug the cord when you leave home for, say, a vacation.

Be sure turn on POWER switch after a Remote cable of RC-35 is connected to the Player unit, otherwise, the apparatus may not work correctly.

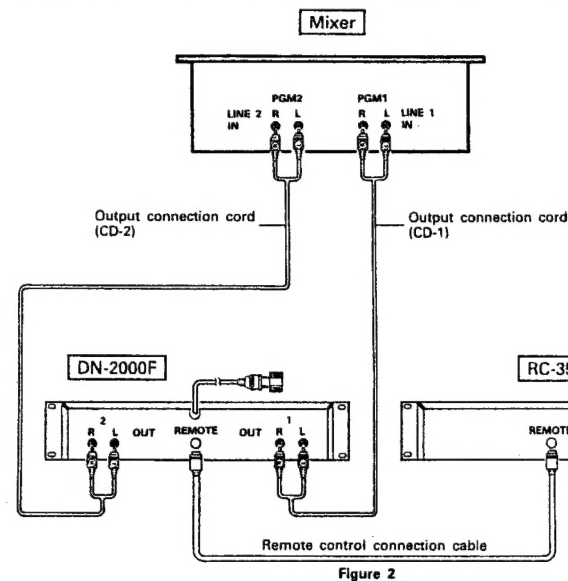

Figure 2

- Connect the connection cords to the line inputs of your mixer.
- The connection cords and the remote control connection cable are supplied with the main unit.
- Be sure to use the remote control connection cable which has been supplied. Use of another cable type might cause damage.

### 3 DESCRIPTION OF THE FUNCTIONS

Below is a description of the names of the various parts and the functions of the main unit.  
(1) Names, Dimensions, and Functions of the Parts of the Main Unit

Figure 3

- 1 POWER (Power Switch)**  
Switches the power of the main unit and the remote control on and off. Power indicator 2 is lit when the power is on.
- 2 POWER (Power Indicator)**  
Lights up red when power switch 1 is on.
- 3 Disc Holder**  
The disc is placed on this holder. Pressing the disc holder open/close buttons 4 will open and close each of the holders. When loading the CD, place it securely in the disc holder.
- 4 OPEN/CLOSE (Disc Holder Open/Close Button)**  
Press to load or eject the disc. Each press will open or close the disc holder 3. The remote control is also equipped with similar buttons.
- 5 REMOTE (Remote Control Connector)**  
This connector accepts the cable which connects to the remote control unit RC-35. Insert the plug securely as far as it will advance.
- 6 LINE OUT (Output Jacks)**  
The audio from each CD player is output from these jacks. Connect to the line input of the mixer. Red is for the right channel and white, the left channel.

(2) Names, Dimensions, and Functions of the Parts of the Remote Control Unit

## 4 BASIC OPERATION

### (1) Loading and Ejecting the Disc

Figure 5

### (2) Selecting Tracks and play mode

Figure 6

Each press of the TRACK button changes 1 track. Continuing to hold the TRACK button down provides an automatic change at a higher speed which is convenient for discs that contain many tracks. During the track selection operation, the track indication of the display will blink and the M S F indication will be off. When a new track is selected during play, after the selection operation is completed, play will immediately start from the beginning of the newly selected track. The track number can be selected before loading a disc on the player unit. You can select a track to play on the controller, then load a disc. The player will cue up to your selected track automatically.

- SINGLE/CONTINUE play mode selection**
- Press the TIME and buttons of PITCH BEND simultaneously to set the player for SINGLE track playback mode, "5" is displayed on TRACK section. During single playback mode, the player stops after a specified track is played back.

- Press the TIME and button of PITCH BEND simultaneously to set the player for continuous playback mode, "C" is displayed on TRACK section. During continuous playback mode, the player continue playback until completion of playback of the last track on the disc.
- When the power switch to ON, the player automatically set to CONTINUE playback mode.

### (3) Starting Play

Pressing the PLAY/PAUSE button during the pause condition or after the completion of back cue will start disc play.

Figure 7

### (4) Stopping Play

There are two ways of stopping play. One uses the pause function and the other the back cue function.

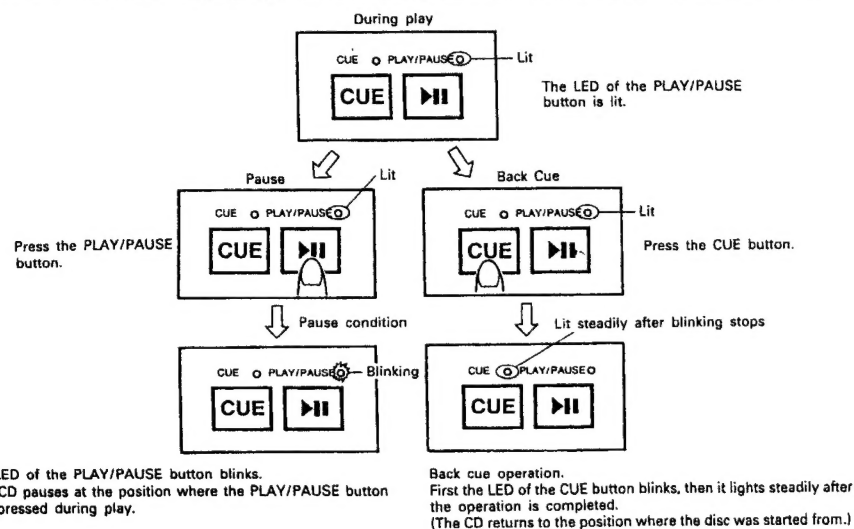

Figure 8

### (5) Description of the PLAY/PAUSE, and CUE Operations

- Each press of the PLAY/PAUSE button causes the operation to change from play to pause or from pause back to play.
- The play operation of this CD player is performed via DSP (Digital Signal Processor) and memory, so the audio starts instantly after the PLAY/PAUSE button is pressed.
- Pressing the CUE button during disc play resets the CD to the position at which play was started. (This is called the back cue function.)

The steps through which disc play is performed when the PLAY/PAUSE and CUE buttons are pressed are described with the aid of the following illustrations in Figures 9 through 11.

#### PLAY and PAUSE

Figure 9

Pressing the PLAY/PAUSE button starts the disc play, the advancement of which is illustrated by the arrows of Figure 9. Pressing the PLAY/PAUSE button again during disc play causes the play operation to pause, and pressing this button once more causes the disc to be played again.

#### PLAY and CUE

Figure 10

Pressing the PLAY/PAUSE button starts the disc. Pressing the CUE button will reset the disc to the position where play was started. By alternately pressing the PLAY/PAUSE button and the CUE button, the disc may be played from the same position any number of times. This function is called back cue.

#### PLAY, PAUSE, and CUE

Figure 11

### (6) Matching the Beats Per Minute

Match the pitch by monitoring the music of both CD-1 and CD-2 by ear. When the tempo of the music of the selected CD player is slow compared to the tempo of the other player, move the slider to the + side and match the tempo. When fast, move to the - side. The following description is for the case of matching the pitch of CD-2 to the pitch of the music being played on CD-1.

CD-1 is playing.

Press PLAY/PAUSE to start CD-2. The LED of the PLAY/PAUSE button will light.

Both CD players are playing discs. Listen to CD-2 in your headphones.

Press the PITCH button of CD-2. The green LED of the PITCH button will light.

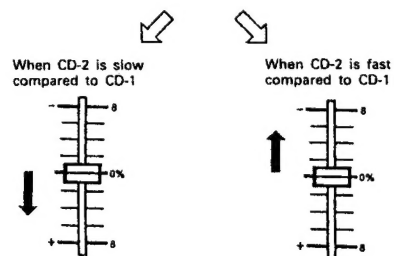

Figure 12

### (7) Beat Matching Using Pitch Bend

A description of the procedure for matching the beat of CD-1 and CD-2 using the PITCH BEND button is given below.

This description is for the case of matching the beat of CD-2 to the beat of the music being played on CD-1.

#### After Matching the BPM's According to Section (6)

When CD-2 is ahead

When CD-2 is behind

Figure 13

The pitch changes automatically while the **+** or **-** button is being pressed. Releasing the button results in a return to the original pitch. (So the BPM's are once again the same.)

### (8) Moving the Play Start Position

When a track is selected and the PLAY/PAUSE button is pressed, the play operation will start from the beginning of that track. However, when you want play to start from a different position, use the following procedure to find that position.

Each press of the SEARCH button causes 1 frame to change. (The frame is indicated at the F portion of the display.) Each frame is 1/75th of a second. Continuing to press down on the SEARCH button provides an automatic change of frames, the speed of which increases while the button is pressed.

Figure 14

### To Start Playback from the Middle of a track.

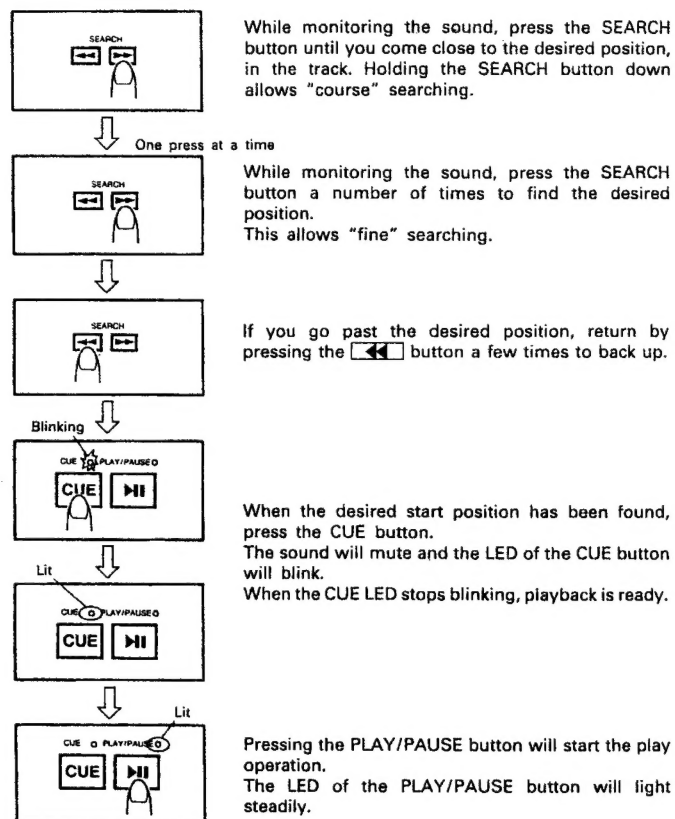

Figure 15

### (9) Checking the Play Start Position

After selecting the track or after changing the play start position with the SEARCH button, use the following procedure to repeatedly check the position at which play will start.

Press the PLAY/PAUSE button. Check that play will start from the desired position.

#### NOTE:

Once you have set up a new start position within a track, do not press the PAUSE or SEARCH buttons. Pressing these buttons will change your start position.

Press the CUE button after checking the start position. The player will return to the position where play was started. When the CUE LED stops blinking, it is ready to start again.

If the play start position is not to your liking, use the search function to change the position.

Figure 16

## 5 EXAMPLE OF MIXING WITH THE DN-2000F

A description of an actual example of mixing using the system illustrated in Figure 2 is given below. After playing back a track on CD-1, and after matching the pitch of CD-2, use cross fader on your mixer to fade from CD-1 to CD-2.

Figure 17

## 6 BEFORE SWITCHING OFF THE POWER

When you have finished using the CD player, before switching off the power be sure that the disc holder has been closed with the OPEN/CLOSE button.

### CAUTION:

Do not forcibly close the disc holder when the power is off. It may damage the unit when it is transported.

Figure 18

## 7 COMPACT DISCS

### 1. Precautions on handling compact discs

- Do not allow fingerprints, oil or dust to get on the surface of the disc. If the disc is dirty, wipe it off with a soft dry cloth. We recommend using DENON's AMC-20/21 CD CLEANER.
- Do not use benzene, thinner, water, record spray, electrostatic-proof chemicals, or silicone-treated cloths to clean discs.
- Always handle discs carefully to prevent damaging the surface; in particular when removing a disc from its case or returning it.
- Do not bend the disc.
- Do not apply heat.
- Do not enlarge the hole in the center of the disc.
- Do not write on the label (printed side) with a hard-tipped implement such as a pencil or ball point pen.
- Condensation will form if a disc is brought into a warm area from a colder one, such as outdoors in winter. Do not attempt to dry the disc with a hair dryer, etc.

### 2. Precaution on storage

- After playing a disc, always unload it from the player.
- Always store the disc in the jewel case to protect from dirt or damage.
- Do not place discs in the following areas:
  - Areas exposed to direct sunlight for a considerable time.
  - Areas subject to accumulation of dust or high humidity.
  - Areas affected by heat from indoor heaters, etc.
